

Client Theme Showcase Guide

CMS 3.0 Theme Families, Variations & Color Application

A contributor-facing reference for reviewing the approved token-based color families, understanding Light / Medium / Dark behavior, and selecting a website theme with confidence.

THEME SELECTION + QUICK REFERENCE

Designed for two ways of working

1

Contributor review

Read the theme system and family pages to understand how each palette behaves across the site shell, blueprint surfaces, links, buttons and controls.

2

Quick selection reference

Jump directly to the family pages, compare Light / Medium / Dark, and record the preferred family + variation for your site team.

Contents

01	Purpose & Architecture What the guide previews; Light / Medium / Dark behavior	3-4
02	Theme Application Live-site anatomy; shell, blueprints and shared UI roles	5-9
03	Theme Families Full palette overview and 10 family reference pages	10-20

Preview scope: the supplied screenshots show Primary Steel Blue & Gray - Light. They are used in this guide as the live reference for how the token palette appears across the actual header, footer, page canvas and blueprint-driven body UI. Component mix may vary by site; the selected color system is the primary decision.

THE OPERATING PRINCIPLE

Select the color system - not a page design.

The CNIC FFR theme architecture separates structure from color roles. Header, navigation, footer and blueprint markup keep their established layout and behavior, while approved theme tokens supply coordinated page, surface, text, border, link, button, accent and focus colors.

- 1 Site shell
Header, navigation, footer, page canvas and shell separators.

- 2 Blueprint surfaces
Cards, list rows, accordions, tables, section areas and detail panels where theme bridge support is enabled.

- 3 Interactive UI
Links, primary / secondary buttons, tabs, form controls, focus indicators and selected states.

- 4 Visual hierarchy
The relationship among deep, medium, pale and accent values - not just a single background color.

Contributor takeaway: two sites can use different combinations of blueprints and content while still sharing the same theme family. Your selection establishes the common color language that the supported shell and blueprint components consume.

Every family uses the same six approved palette primitives. The selected tone changes which primitive drives the canvas and which values are used for surfaces and actions.

Content surface

ACTION

LIGHT
Pale family canvas + white cards

Best when an open, familiar and content-forward experience is preferred.

Content surface

ACTION

MEDIUM
700 canvas + 900 surfaces

Stronger family presence while retaining distinct cards and elevated controls.

Content surface

ACTION

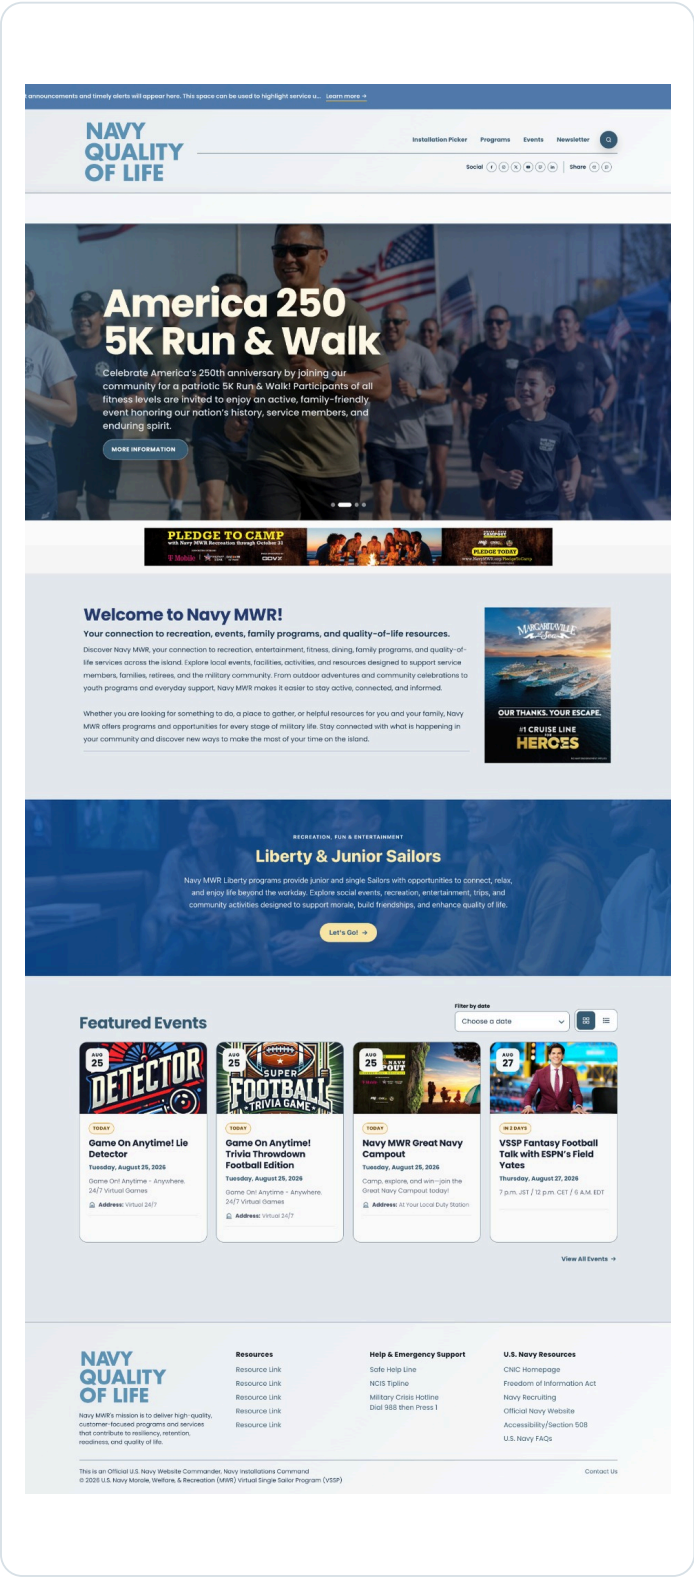

DARK
950 canvas + 900 surfaces

Most immersive expression; uses the deepest family value for shell and page canvas.

Semantic role pattern

ROLE	LIGHT	MEDIUM	DARK
Page / header / footer	100	700	950
Primary cards / strong surfaces	White	900	900
Primary text	950	White	White
Secondary / muted text	900	100	100
Primary action	700	Accent	Accent
Form / elevated controls	White	White	White

The supplied homepage screenshot is the reference example for the default Primary Steel Blue & Gray - Light environment. The palette appears as a coordinated system across the shell and body rather than as one flat background.

1 Header + navigation
The Light canvas uses the family pale value (#E5EAEE), with dark steel text and navigation details. White/translucent shell surfaces provide separation without changing families.

2 Page canvas
The same pale family value continues behind major content areas. This gives the page a coherent visual field while allowing white cards and media to stand forward.

3 Buttons + accents
Primary actions use the family 700 steel blue (#365B73). The metallic-gold accent (#C79A3B) is reserved for emphasis and selected/focus roles rather than large background areas.

4 Footer
The footer returns to the same Light shell environment, using the pale family canvas and dark text for continuity from header to page end.

Reference note: imagery, content and blueprint order can vary by site. The important reference here is how the selected palette establishes shell, canvas, surface, text and action relationships.

These cropped views come directly from the supplied Primary Steel Blue & Gray - Light screenshot and show the real shell treatment that contributors will recognize.

CNIC FFR Client Theme Showcase Guide

6

The theme bridge applies the selected semantic color roles to supported blueprint defaults while the blueprint retains its own layout, spacing, media treatment and interaction pattern.

What remains blueprint-owned

- 1 Grid / list structure
- 2 Image ratio + media placement
- 3 Spacing + component geometry
- 4 Accordion / table behavior

What becomes theme-aware

- 1 Page + section canvas
- 2 Card / surface backgrounds
- 3 Text + muted text
- 4 Links + action buttons
- 5 Borders, focus + selected states

Bridge principle
Supported default blueprint colors are mapped into semantic tokens so the component belongs to the selected family. Intentional non-default author color choices remain authoritative where the blueprint allows them.

Activity detail pages demonstrate how the theme system must support both editorial content and dense functional UI. The supplied screenshot uses Primary Steel Blue & Gray - Light.

ACTIVITY INFORMATION

Join the Navy MWR Virtual Single Sailor Program for an exclusive **Fantasy Football Talk with ESPN's Field Yates**. Field will share expert insights, draft strategies, game-day advice, and lineup tips to help you prepare for the VSSP **High Seas Showdown Fantasy Football League**. Whether you are an experienced fantasy football player or joining a league for the first time, this virtual event is a great opportunity to learn from one of the most trusted voices in fantasy football.

Event Dates and Times:

- August 5, 2026: 7 p.m. PST / 10 p.m. EST
- August 12, 2026: 7 p.m. JST / 6 a.m. EST
- August 13, 2026: 7 p.m. EST / 4 p.m. PST
- August 19, 2026: 7 p.m. CET / 1 p.m. EST

Form and elevated-control behavior

Even in Medium and Dark site tones, input fields and other elevated controls remain light for scanability. Text inside those controls returns to the family deepest value, while focus and action roles remain theme-aware.

Medium + Dark behavior

Medium and Dark environments invert the surrounding page relationship: the canvas becomes family 700 or 950, strong surfaces use family 900, and primary text becomes white. Primary action buttons shift to the family accent. Light form controls and other elevated surfaces remain available to preserve legibility and interaction clarity.

CNIC FFR Client Theme Showcase Guide

9

Each family contains six palette primitives: 950 (deepest), 900, 700, 500, Accent, and 100 (pale). The same tone rules are then applied to every family.

Primary Steel Blue & Gray
